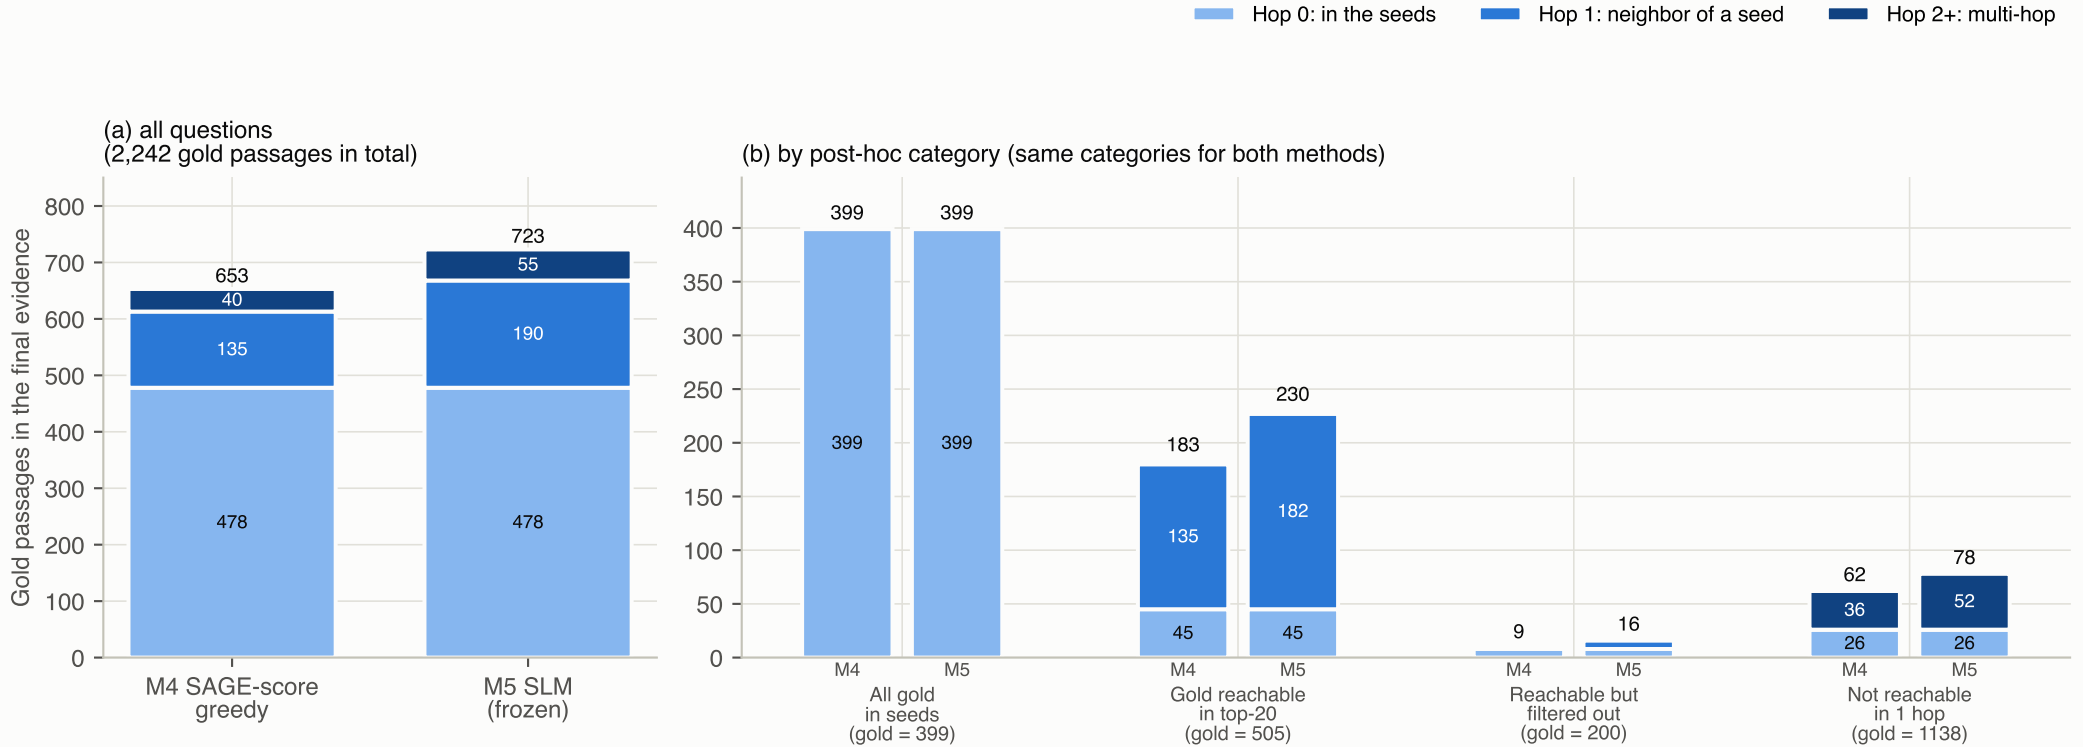
F3. Gold passages retrieved, by hop depth, M4 vs M5 — TEST-1704 (n = 1,704), B = 4, maximum budget



Hop 0 = gold already in the seeds (identical for both methods); hop 1 = discovered gold that is a direct graph neighbor of a seed; hop 2+ = discovered gold that is not. Counts of gold passages (ID-based). Source: analysis/scores/per_question.jsonl (same values as T5b).
